

Registered Onsite Waste Water Handling

New North Construction has a "Registered Onsite Waste Water Practitioner" on staff and is full capable of handling waste water/sewer/canalization projects:

- site estimation/assessment, planning/consideration
- preparation of the work site, excavation, trenching, leveling and actual pipe/septic tank installations according to the standard practice;
- Quality control before/during/after job completion, maintaining monitoring, and servicing sewerage systems
- private residential and commercial inspections by using Type 1 and Type 2 treatment methods.

All work is done with the highest degree of responsibility, care, allegiance and commitment.
